

In the Specification:

Amendments to the Specification:

Please amend the paragraph at page 9, lines 5-9 as follows:

The routing information is not passed through the KIV-7HSB 200. The black side router 206 provides the routing of the WAN link. The red side router 202 provides the routing information for the network traffic and is contained in the encrypted payload. This information is passed from red side router 202 to ~~red~~ black side router 206.
